

## **Material Collected from the Lake and Beach**

### **Liquid Collected**

- In the 24-hour period ending midnight April 3, zero barrels of water-oil mix were recovered from the lake.
- It is estimated that a total of 12 – 33 barrels of oil have been recovered mixed with an estimated 862 – 883 barrels of water since the onset of the incident March 24, 2014.

*One barrel = 42 gallons*

### **Solids Recovered**

- In the 24-hour period ending midnight April 3, 0.05 cubic yards of solids were collected at the lakefront.
- It is estimated that a total of 122 cubic yards of solids have been recovered since the onset of the incident March 24, 2014 (Note: the total accumulated volume has been reduced by 6.43 cubic yards because one receptacle was inaccurately characterized as beach material but was in fact #6 separator solids).
- Detailed analytics continue on all solid waste collected at the request of EPA.
